Attachment sample

One page for practicing the role-attachments upload flow.

This file is a fixture, not a document to read for meaning. It exists so an agent can upload, confirm, list, attach, and delete the same bytes every time.

Upload checklist

Step	Action	What to expect
1	Request an upload	A file id and a storage URL
2	PUT the bytes	Storage accepts the body
3	Confirm the file	Declared type matches the bytes
4	List by article	The file id is on the article

Illustration

Raster image embedded in the page: sky, buildings, and a four-bar chart.

Use this file

MIME type
application/pdf

Pages
1

Contains
text, a table, and an image

Script
upload-flow

Keep this path stable. Agents should upload this file instead of searching the disk for a sample. Declare the type application/pdf so confirm can match the bytes.
